HALFEN's HIT Insulated Connection Receives First ICC Approval for a Structural Thermal Break in North America

HALFEN's HIT Insulated Connection has recently received the first ICC-ES Evaluation Report (ESR), [ESR#3799](#), for a structural thermal break system from ICC Evaluation Services (ICC-ES). ICC-ES is the industry leader in performing technical evaluations for code compliance. An ESR provides proof that products and systems meet required codes and technical standards. They are the most trusted and recognized approval by building officials, architects, contractors, specifiers, designers and engineers. Code compliance is ensured through the detailed approval process consisting of the thorough examination of test reports, calculations, quality control methods and production processes.

The award of an ESR for HIT reaffirms HALFEN's commitment to providing the highest quality products and engineering support to its customers. In addition to HALFEN's [ESR-3799](#), the new [HIT Product Range Catalog](#) and [HIT v9.11 comprehensive design software](#) can be downloaded from our website.

The [HALFEN HIT Insulated Connection](#) eliminates the adverse effects of thermal bridging typically associated with concrete balconies (mold growth, energy loss, cold floors). HIT Insulated Connections are the only structural thermal breaks with an ICC approval, ensuring quality and safety to designers. All standard units come with a 2-hour fire rating. HALFEN's HIT system, moves us one step closer to a greener future.

HALFEN USA is the leading company in anchoring, reinforcement, mounting/framing and facade connection technology. The basis of our success is long-term partnerships with our customers and suppliers. The HALFEN name stands for quality, customer service and innovation. To learn more, visit our website www.halfenusa.com.
